CO₂ Solution to Present at Sustainable Development Technology Canada Investor Day

CEO Glenn Kelly to Outline Company Plan to Capitalize on Multi-Billion Dollar Carbon Capture Market

Quebec City, October 15, 2008 – CO₂ Solution Inc. (“CO₂ Solution”) is pleased to announce that it has been selected to present at the Sustainable Development Technology Canada (SDTC) Investor Day on October 16, 2008 at 4:00PM at the TSX Broadcast Centre. The presentation by Glenn Kelly, President & CEO will focus on the opportunity for the Company’s breakthrough technology to address the multi-billion dollar market for carbon capture systems. Mr. Kelly will also participate in a TSX Market Opening ceremony the morning of October 17.

CO₂ Solution was selected to present as an SDTC investee company and the event will be attended by leading institutional investors and other TSX market participants.

With over \$340 million in invested capital, SDTC is a not-for-profit foundation that finances and supports the development and demonstration of clean technologies which provide solutions to issues of climate change, clean air, water quality and soil, and which deliver economic, environmental and health benefits to Canadians. SDTC’s mission is to act as the primary catalyst in building a sustainable development technology infrastructure in Canada.

For further information on the event or for registration information, please contact Kathryn Lanoue, Outreach and Events Coordinator, Tel: 613-234-6313 ext. 224.

About CO₂ Solution

CO₂ Solution Inc. has developed a proprietary bio-technological platform for the efficient capture of carbon dioxide (CO₂), the most important greenhouse gas (GHG), from power plants and other large stationary sources of emissions. The Company’s technology platform exploits the natural power of a bio-catalyst (enzyme), carbonic anhydrase, which functions within humans and other mammals to manage CO₂ during respiration. CO₂ Solution has successfully adapted the enzyme to function within an industrial environment, and thus has taken advantage of a biomimetic approach to CO₂ capture based on millions of years of evolution. The Company is commercializing its technology for coal fired power generation, the oil sands and other CO₂-intensive industries where a low-cost capture solution is key to meeting climate change legislation in a cost
